

Heavy-Duty Thimble

Weight: 0.00kg

Dimensions: 0.00cm x 0.00cm x 0.00cm

Description

PLP's **Heavy-Duty Thimbles** are available with locking tabs (patented) or without locking tabs and are designed to fit into the loop of a [TREEGRIP™ Dead-end](#). PLP recommends using these thimbles with TREE-GRIP Dead-ends to ensure proper application and performance. Each size is rated and laboratory tested to withstand the rated breaking strength of its designated strand size and is cycle test-proven to stay in place throughout the life of the cabling system. All Thimbles are hot-dipped galvanized to ASTM A153 standards for corrosion resistance. The locking tab version is useful to ensure the thimble stays in place before installation.

Features

- Available in 3 sizes corresponding to TREE-GRIP Dead-end sizes
- Ensure best performance of the TREE-GRIP Dead-end
- Locking tab thimble remains in place during cable installation
